

**Actionable Intelligence for a Safer World
and a Smarter Enterprise**

VERINT
POWERING ACTIONABLE INTELLIGENCE®

Verint helps government and industry make sense of the vast video, voice, and data they capture.

**As the market leader in IP video management solutions,
Verint should be on the short list of every enterprise buyer.**
— Frost & Sullivan

Government and industry recognize the value of timely security and business intelligence. They collect vast amounts of information in an array of enterprise systems — far more information than they can rapidly assess and use.

Verint® helps these organizations make sense of the vast information they capture.

Verint solutions extract significant information from voice, video, and data, bridging information gaps between enterprise systems and applying sophisticated, integrated analytics to distill *actionable intelligence*. Then, Verint solutions distribute this intelligence to the people who need it, wherever and whenever they need it, for timely and effective action.

In the security arena, this actionable intelligence helps government and commercial organizations detect terrorism and crime, secure critical infrastructure, and protect people and assets.

In the business intelligence market, actionable intelligence helps improve the performance of customer touch points throughout the enterprise for more efficient operations, more loyal and satisfied customers, and more profitable business outcomes.

Built on open, standards-based architectures, Verint solutions are engineered for scalability, rapid deployment, and ease of use in global operations and complex environments.

These intelligent enterprise platforms help organizations maximize their investments and resources, while harnessing powerful new technologies to prevent terrorism and crime, improve performance, and build competitive advantage.

Verint is among the best managed and best positioned companies in our Security universe.

— CE Unterberg, Towbin

Actionable Intelligence for a Safer World™

Verint Networked Video Solutions

Nextiva leads the industry in networked video solutions that help organizations protect people, property, and critical infrastructure. Nextiva™ is a comprehensive, integrated portfolio of networked video solutions designed to rapidly detect potential threats, improve emergency event management, reduce liability and loss, and increase operational efficiency.

Nextiva captures video, audio, and data from virtually any location and security or business system, applies powerful analytics to detect significant events, and delivers this intelligence to the appropriate personnel for rapid, effective action.

Nextiva simplifies management of large, geographically-distributed video operations with intelligent video distribution; robust video management software; system-wide monitoring and diagnostics; wireless and wireline analytics-embedded edge devices that enable the capture, networking, and analysis of video from indoor and outdoor locations; and built-in mass export, video authentication, and investigation management capabilities designed to make investigations more productive.

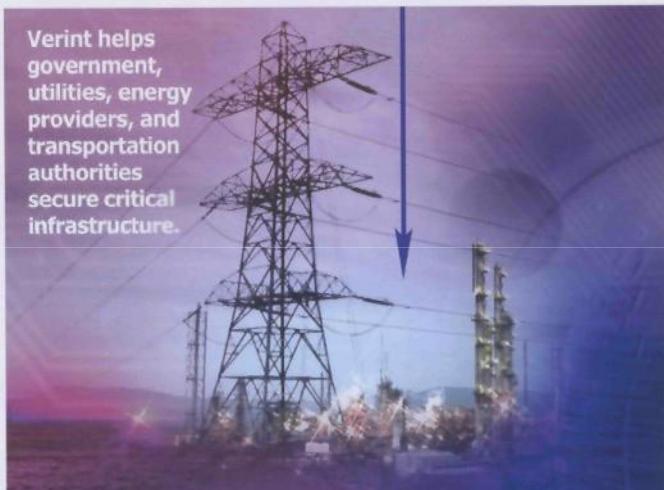

Nextiva solutions are also available to address the needs of specific market sectors, including mass transit, critical infrastructure, retail, and banking.

Verint Communications Interception Solutions

Verint Communications Interception Solutions help government and law enforcement agencies neutralize threats from criminals and terrorists and help service providers comply with government mandates on electronic surveillance.

VANTAGE™ and RELIANT™ capture and detect significant information in massive volumes of voice and data. Verint's integrated X-TRACT analytics suite mines communications content to identify speakers, languages, and locations and assess the chain of communications. Correlating communications content and analyses with pertinent information from

Verint helps government, utilities, energy providers, and transportation authorities secure critical infrastructure.

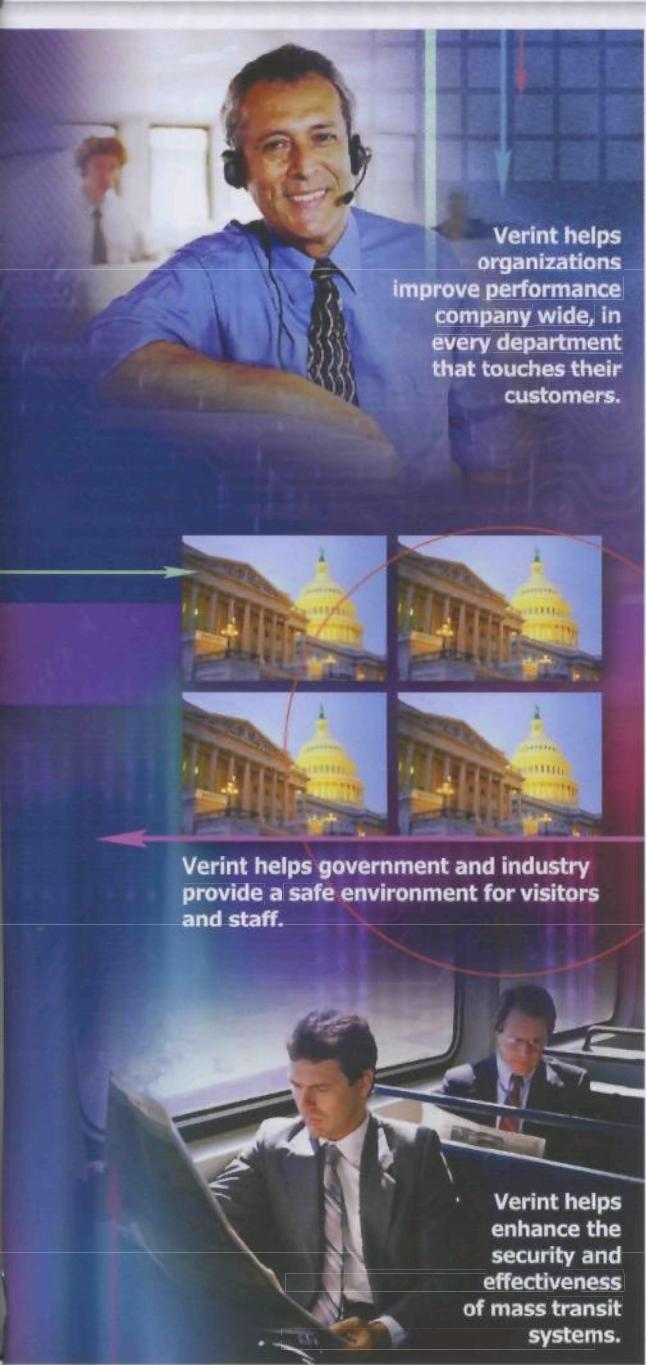

Verint helps law enforcement and government agencies gather intelligence and collect evidence for prosecution.

Verint helps retailers reduce shrinkage and inefficiency and improve the shopper experience.

other sources — police reports, financial records, Internet activity, etc. — Verint Communications Interception Solutions provide government and law enforcement agencies with a more comprehensive view of important activity, so that they can rapidly identify potential threats and establish evidence for prosecution.

Actionable Intelligence for a Smarter Enterprise™

STAR-GATE™ helps communications and Internet service providers access, administer, and deliver intercepted communications and historical data records in compliance with international standards and government mandates. Verint solutions are ETSI and CALEA compliant and work with virtually any type of network, content, application, or service.

Verint Contact Center Solutions

Verint Contact Center Solutions help organizations improve business performance by aligning all customer touch points — from the front lines to the back office — with market needs and enterprise goals.

ULTRA™ is a robust contact center recording and analytics platform that captures customer interactions, plus data from agent desktop applications, post-call customer surveys, and CTI, CRM, and other enterprise systems. The ULTRA Analytics™ Suite detects significant trends and relationships in this information, from the root cause of agent quality and productivity metrics to the relationship between products/services and customer perceptions or business outcomes. And ULTRA's Web-based desktop portal and intelligent, enterprise-wide routing of recordings and analyses extend the benefits of this intelligence to customer touch points company wide.

ULTRA redefines quality as an enterprise initiative and helps organizations use the intelligence in their customer contacts to increase operational efficiency, improve regulatory compliance, reduce liability and loss, and optimize the processes that shape customer satisfaction, loyalty, and value.

Verint Enterprise Performance Solutions

Verint Opus™ Solutions helps service-intensive enterprises improve performance and reduce operational costs in their contact centers and back office processing areas.

Opus Solutions provides a unique blend of technology and services that delivers strong impact and guaranteed results for their customers. The Opus Suite analyzes data collected across the enterprise and identifies areas for improvement. Combined with expert services, including process optimization and performance training, Verint Opus Solutions provides a foundation for continuous performance improvement and helps organizations enhance both operational efficiency and customer experience.

Verint is committed to meeting our customers' changing needs with innovative solutions and superior return on investment.

Since 1994, Verint has been delivering actionable intelligence solutions that help our customers achieve their security and operational objectives.

Our industry-leading analytics deliver strategic, real-world value by distilling the intelligence that is mission-critical to government and industry — whether detecting criminal networks, pinpointing trespass, theft, or fraud, revealing performance deficiencies, or surfacing market trends and perceptions.

These integrated analytics provide our customers with a more complete, accurate, and timely view of the factors that are integral to their success.

And they leverage Verint's powerful intelligence distribution engines, designed to deliver intelligence wherever and whenever it is needed, according to each organization's structure, operation, and goals.

We are committed to meeting our customers' changing needs and dedicate more than a third of the 1500 Verint professionals around the globe to ongoing product development and enhancement.

And we design our solutions to be flexible, scalable, and IT friendly, to provide our customers with cost-effective implementations and long-term investment protection.

Today, over 1000 government and commercial organizations in more than 50 countries use Verint solutions to enhance their security and business intelligence initiatives. These organizations consistently recognize Verint for innovation, long-term business value, and outstanding return on investment.
